

13:42

Hi Hector, I'm doing a significant code review too  
I'll name the new methodology Hector Cost Pricing  
I got a room full of your acronyms and principles  
Just to chat, truly yours, your biggest fan, this is Stan

I expect charges on generation to be passed through  
If investment in generation is to be justifiable  
No argument for residual charges on generation  
But reducing distortions is the more important issue  
But I've completely forgotten about the risk  
Of distortions between generation technologies  
And my boss just had lunch with some big generator  
Or maybe the minister  
I am so confused, Hector, why won't you help?

Read 12:34

I'm going to charge for gross consumption  
You could've rescued me from drowning  
I'm on a thousand pages of cost/benefit, I'm drowsy

What's this shit you said about it not mattering  
Whether you charge generation or demand?  
I say that shit just clowning, dawg  
Come on, how fucked up is you?  
Generators have to pay for system services they use  
You got some issues, I think you need consultants  
To help you figure out what your services are  
I really think you and customers need each other  
Or maybe you just need to treat them better  
I think that you'll be doing just fine  
If you relax a little, I'm glad I inspire you  
But Stan, why are you so mad?  
Try to understand that I do want you as a fan  
I just don't want you to do some crazy shit
